

Breath of life

Genesis 2:7

And YHWH God formed the human, dust drawn from the ground, and he exhaled into his nostril breath of life, and the human became as a living soul.

When the whole world is suffering from deadly virus which on entering the lungs blocks the air passage with thick sticky phlegm leading to pneumonia, chest congestion, difficulty in breathing due to inflammation of the air sacs (alveoli). The alveoli's get filled with fluid or pus making it difficult to function. A situation where, though you have air around you but your system is unable to breath in the oxygen loaded air from the atmosphere.

A situation where, you are struggling hard to breath in and out, where all you are left alone with yourself trying to find a way, where the brain stops finding all possible options, where knowledge of anatomy/ physics/ chemistry comes to stand still...you are cornered to seek the help of the Almighty, for granting with the blow of life giving breath, into the nostrils as HE had done for Adam.

Yes, that's the time when you suddenly feel the air passage opening up, trachea-bronchi--bronchioles and finally the air sacs getting activated as if some instant energy was pumped in and the whole engine which was ceased, started with a BANG, all nut bolts of the system got lubricated and everything regained its life. Wowww...

You know what was that???

It was the "breath of life from our Super GOD" who is still watching over us sitting on HIS beautiful throne. HE is still in full control. Imagine this same breath was blown when GOD formed man from the dust and man became alive. HE is the same GOD even today. HE still blows life giving breath into people's nostril.

Hallelujah to the Most High.

We all have the same breath of life in us. Be grateful and thankful.

Keep it safe as it is HIS breath within us.

Shalom to all!
